

Energy Management Policy

SFO Technologies is committed to responsible and sustainable business operations. We recognize that energy efficiency and conservation are critical aspects of our environmental and economic responsibilities. This Energy Management Policy outlines our commitment to managing energy effectively and reducing our carbon footprint by adhering the following principles:

1. We will continually seek opportunities to improve energy efficiency, reduce consumption, and minimize greenhouse gas emissions across our facilities and operations.
2. We will comply with all relevant energy-related laws, regulations and other requirements including customer requirements.
3. We will ensure that our employees and stakeholders are aware of this policy and provide them with the necessary training to implement energy-efficient practices.
4. We will use energy responsibly and strive to minimize energy waste in all areas of our business operations.
5. We will set, monitor, and strive to achieve energy performance targets, regularly reviewing and updating them as necessary.
6. All employees are encouraged to contribute to energy efficiency by identifying areas for improvement and adhering to energy management practices.
7. We will explore and invest in renewable energy sources where applicable and economically viable.
